DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed over prior art of record. The following is an examiner's statement of reasons for allowance: Hershkovits et al. (US 6003004) disclose a vocoder based voice recognizer recognizes a spoken word using linear prediction coding (LPC) based, vocoder data without completely reconstructing the voice data. The recognizer generates at least one energy estimate per frame of the vocoder data and searches for word boundaries in the vocoder data using the associated energy estimates. If a word is found, the LPC word parameters are extracted from the vocoder data associated with the word and recognition features are calculated from the extracted LPC word parameters. Cox et al. (US 6792405) teach a feature extraction process for use in a wireless communication system providing automatic speech recognition based on both spectral envelope and voicing information. The shape of the spectral envelope is used to determine the LSPs of the incoming bitstream and the adaptive gain coefficients and fixed gain coefficients are used to generate the "voiced" and "unvoiced" feature parameter information (referring to Cox reference). Both prior art references fail to specifically disclose the steps of concatenating LPC filter parameters and residual signal into an extended vector and reducing dimensionality of the extended vector. Furthermore, it would have not been obvious to one of ordinary skill in the art at the time of invention to modify Hershkovits et al. and/or Cox et al. to obtain the claimed invention. Therefore, claims 1-11 are allowed over prior art of record.
